The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/825,002

Applicant(s)

BELETSKY ET AL.

Examiner

Jack H. Morgan

Art Unit

3782

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 13 November 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-16 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-16 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 14 April 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on November 13, 2007 has been entered.

2. All claims are drawn to the same invention claimed in the application prior to the entry of the submission under 37 CFR 1.114 and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the application prior to entry under 37 CFR 1.114. Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first action after the filing of a request for continued examination and the submission under 37 CFR 1.114. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Terminal Disclaimer

3. The terminal disclaimer filed on November 13, 2007 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of US Patent No. 6,769,582 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1, 4, 7-12 15 and 16 are rejected under 35 U.S.C. 102(b) as being anticipated by Corrison (US 1,635,984). Corrison discloses a revolver holster (Fig 1 and 2) with a pouch (7) having inside and outside panels (folded around gun), a housing (9) secured to the pouch by a fastener (10) having a slot (11) and a fixed stop (12), a pivotable second-class lever (16) having a finger engaging end (23) (spaced a distance away from the wearer's trigger finger and below the trigger guard relative to the barrel of

the handgun (note the barrel in Figure 2 is far to the left, the trigger guard (G) is in the middle and the finger engaging end (23) extends farthest to the right of the figure)) and a blocking projection (18) to capture the trigger guard of the handgun and a resilient device (21) positioned within the housing (9) for urging the blocking projection into a space within said trigger guard. In regards to claim 7, the end of the lever that engages the trigger guard is essentially inaccessible to the wearer's trigger finger, as it is inside the housing, preventing accidental discharge of the firearm.

In regards to claim 2, a fulcrum device (15) is secured to the housing on one side of the slot (the bottom side) and the lever (16) is secured to the housing by the fulcrum.

In regards to claims 10, 11 and 12, the inside and outside guides of the housing comprise the two sides (on either side of 2-2) of the housing with the inside guide being a curved guide (13) and the outside guide extending outwardly (14). Both inside and outside guides cooperate to attach the lever (at 15) and to constitute a stop (12). In addition, the two guides cooperate to define between them a slot to receive the handgun's trigger guard.

In regards to claim 15, the outside guide (14) cooperates with the housing (13) to define a slot, the housing having a pivotable lever (16). The finger-engaging end of the lever is positioned so as to be engagable by the wearer's middle finger, and capable of being not engaged by the wearer's trigger finger, to the extent the applicant's claim defines structure pertaining to this limitation.

In regards to claim 16, the finger-engaging end of the lever is substantially inaccessible to the wearer's trigger finger, as the wearer's hand, resting on the butt of

the revolver, would have to twist merely to allow engagement with a middle finger, depending on hand size of the wearer.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 3 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Corriston (US 1,635,984). Corriston discloses all the limitations of the claims except for a first-class lever and a resilient device on one side of the slot that contacts the lever on the same side of the fulcrum as the blocking portion. It would have been obvious to one having ordinary skill in the art at the time the invention was made to move the leaf spring (21) to the opposite side of the holder (9) so it would contact the lever (16) near the blocking portion (18), since it has been held that rearranging parts of an invention involves only routine skill in the art. *In re Japikse*, 86 USPQ 70. Also, the lever would work equally well in either configuration, as based on figure 1, the moment arm would remain the same, causing the same force to be applied.

In regards to claim 5, the resulting configuration places the resilient device on the right side (in Fig 1) of the slot, and the resilient device and blocking projection are on the same side of the fulcrum.

6. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Corrison (US 1,635,984) in view of Carver (US 5,509,591). Corrison discloses all the limitations of the claims except for a fulcrum device secured to the housing at the end of said lever, with said resilient device and blocking projection positioned between the fulcrum device and said finger engageable end. Carver discloses a handgun holster (Fig 10 and 11) with a lever (144), a resilient device (160), a fulcrum (150) and a blocking projection (156) that engages the handgun trigger guard (136) in order to prevent the forced removal of the gun from falling out of the holster (Abstract). The lever of Carver has the fulcrum at one end, and the finger engaging end at the opposite end, with the resilient device and blocking projection in between. When replacing the lever of Corrison with the lever of Carver, the housing of Corrison is not changed, as that is what maintains the position of the gun's handle so it can be easily grasped. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to create the holster of Corrison with the lever of Carver in order to prevent the forced removal of the gun from the holster.

7. Claims 13 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Corrison (US 1,635,984) in view of Vor Keller et al. (US 6,230,946). Corrison discloses all the limitations of the claims except for a pair of spaced slots through the body member to define a path for the wearer's supporting belt. Vor Keller et al. disclose a gun holster with a method for trigger guard retention that additionally has a pair of

slots to support the holster on a wearer's belt (Col 9, lines 33-36). Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to create the holster of Corrison with the slots of Vor Keller et al. in order to mount the holster on a belt.

In regards to the added limitation that the trigger finger of the wearer cannot engage the trigger while normally operating the finger-engaging end of the lever, the trigger is encased in the holster while the lever is being used, and as such, the trigger cannot be engaged.

Response to Arguments

8. Applicant's arguments filed November 13, 2007 have been fully considered but they are not persuasive. Applicant argues that Corrison does not have a pivotable lever spaced below the trigger guard relative to the barrel. Examiner notes that the claim language requires the finger engaging end of the lever to be space below the trigger guard relative the barrel, and further notes that Figure 2 of Corrison shows this configuration, with the barrel being farthest to the left of the figure (now top in coordinates of applicant's claim) then the trigger guard (G) and finally the finger engaging end (23) of the pivotable lever (16) is farthest to the right (bottom in coordinites of applicant's claim). As such, Corrison meets all the limitations of the claims.

Conclusion

9. As noted above (See paragraph 2), **THIS ACTION IS MADE FINAL**. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

10. Applicant is duly reminded that a complete response must satisfy the requirements of 37 C.F. R. 1.111, including: "The reply must present arguments pointing out the specific distinctions believed to render the claims, including any newly presented claims, patentable over any applied references. A general allegation that the claims "define a patentable invention" without specifically pointing out how the language of the claims patentably distinguishes them from the references does not comply with the requirements of this section. Moreover, "The prompt development of a clear Issue requires that the replies of the applicant meet the objections to and rejections of the claims." Applicant should also specifically point out the support for any amendments
